

Visting Organic Resources Recovery Centre Phase 1 @ Environmental Protection Department

Date : 14-6-2024

Class : K3

Place : 5 Sham Fung Road, Siu Ho Wan, North Lantau. (Organic Resources Recovery Centre Phase 1)

Content :

The K3 children discovered more severe abnormal weather phenomena while studying the theme "Sunny, Rainy, Typhoon Weather". During the English topic "Green City", we learned about the classification names for environmental recycling. Our Yau Oi Estate even has a Smart Food Waste Bin! However, where does the recycled food waste go, and how can it be turned into renewable energy?

Today, we visited the O-PARK1 Organic Resources Recovery Centre of the Environmental Protection Department to understand the processing method, energy generation and composting process after the food waste is transported to the recycling centre. Through the guide's explanation and the "Food Waste Adventure" video, we gained an understanding of the environmental impact of food waste and the hard work of the food waste processing staff. We are determined to reduce waste and stop wasting.
