

**Kindergarten Education Scheme**  
**School-based Learning Activity of Chinese Culture**

**Name of School Yan Chai Hospital Yau Oi Kindergarten/Child Care Centre**

**School Year 2024-2025**

**Grade K1 · K2**

**Name of Activity**

**K1K2 Chinese Panda Trail @ Hong Kong Ocean Park**

**Objective(s)**

- Understand the dietary habits of the Chinese national treasure, the panda.
- Experience firsthand the daily activities of pandas.

**Brief Descriptions:**

When K1 explored "The Secrets of Small Animals" and K2 learned about "Kissing Nature," we embarked on a fun-filled journey of natural learning! Today, we visited Hong Kong Ocean Park to participate in a small drama activity and learn about the dietary habits of the national treasure, the giant panda—surprisingly, they love eating bamboo shoots, bamboo stalks, and bamboo leaves! We also learned about their "pseudo-thumb," which helps them grasp food with agility.

Next, we set off on the "Giant Panda Journey" to observe the pandas' daily activities and understand their behavior and habitat. In addition to pandas, we were delighted to encounter animal friends like turtles, otters, clownfish, and manta rays, which truly opened the children's eyes!

This visit was a vivid outdoor natural education activity that helped the children cultivate observation skills, curiosity, and an attitude of caring for animals in a real-life context. Let's step into the animal world together, uncover their secrets, and experience the wonders and beauty of nature!

**Record of Activity (E.g. Children's Work / Photos / Videos of the activity)**
