[K3 "Ocean Park Academy Hong Kong Educational Activities - Rainforest Adventure" Nature Exploration Class]

K3 children embarked on a nature exploration journey to "Learn to Love the Earth"! Led by professionals, they entered the "Tropical Rainforest World," observing animals such as pygmy marmosets, parrots, poison dart frogs, and anacondas up close, learning about their habits and physical characteristics. In the story theater, the children were surprised to discover that everyday foods like cocoa beans for chocolate actually come from the rainforest! We also took this opportunity to visit other animal friends at Ocean Park, including penguins, spotted seals, and walruses. This outdoor learning experience not only broadened our horizons but also inspired a love for nature, cultivated our observation skills and curiosity, and allowed the seeds of conservation to sprout in our hearts, enabling us to experience the wonder and beauty of nature.

Children's Quotes:

"The pygmy marmoset is the smallest monkey in the world, so tiny!"

"I thought pygmy marmosets ate fruit, but it turns out they eat tree sap."

"So the cocoa beans used to make chocolate grow in tropical rainforests."

"Don't cut down too many trees, leaving animals without homes and food. We must protect our planet."

Learning Tips:

Parents can practice environmental protection concepts with their children: protect nature when outdoors, reduce the use of single-use plastics, choose environmentally friendly products, develop habits of saving water and electricity, and help children understand the importance of animals and ecology through reading picture books or watching documentaries, cultivating an attitude of loving life. Parents and children can also participate in recycling and sorting or planting small plants, allowing children to experience actions to protect the planet and establish environmental habits from a young age.
